Question 1:

Write a query to create a table **Employee** and use the **DROP** commands to drop columns and constraints in it:

1. Attributes are:
   a. Employee number
   b. Employee name
   c. Job
   d. Hire date
   e. Salary
   f. Commission
   g. Department number

2. Add the primary key constraint to the column **Employee number.**
3. Apply **not null constraint** on **Salary** Column.
4. Apply **check constraint** on **commission**, that commission must be great than 2000.
5. Apply **default constraint** on **department number** as "Computer Science" .
6. Now delete the table **Employee.**
